

Scalability & Future Plan

Date	05 July 2026
Team ID	XXXXXX
Project Name	AI Powered Debt Relief & Financial Recovery Platform
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Uses Gemini free-tier API with request limits.	AI analysis may be temporarily unavailable when the limit is reached.	High
2	User data is mainly stored using local storage and SQLite.	Not suitable for handling a large number of users.	High
3	Financial analysis uses fixed income and expense values.	Results are less personalized for different users.	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Supports a limited number of users.	Deploy the application on a cloud platform to support more users.
2	Data Storage	Uses SQLite and local storage.	Upgrade to MySQL or PostgreSQL for better data management.
3	Performance	Basic API processing with fallback handling.	Optimize backend APIs and improve response time using caching.
4	Security	Basic user authentication.	Add JWT authentication, HTTPS, and stronger data protection.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Allow users to enter their own income and expense details.	Short Term	More accurate financial analysis.
Phase 2	Add loan repayment tracking and progress reports.	Medium Term	Better financial planning for users.
Phase 3	Integrate advanced AI suggestions for debt recovery.	Medium Term	More personalized financial guidance.
Phase 4	Deploy the application to the cloud with support for multiple users.	Long Term	Improved scalability and accessibility.
