

Solution Requirements

Date	29 June 2026
Team ID	XXXXXX
Project Name	AI Powered Debt Relief & Financial Recovery Platform
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users can securely log in using their User ID and access their dashboard.	High
2	Authorization levels	Only authenticated users can access their loan details and financial analysis.	High

3	External interfaces	The system communicates with the Google Gemini API to generate AI-based financial insights.	High
4	Transactions processing	Users can add, view, and delete loan details, and the system updates the financial summary instantly.	High
5	Reporting	The dashboard displays total debt, monthly EMI, financial risk, and recovery suggestions.	Medium
6	Business rules, etc.	Financial analysis is performed using the user's loan details and predefined income and expense values.	High
7	Compliance to laws or regulations	The application provides financial guidance while displaying consumer protection information and maintaining user privacy.	Medium
8	<i>Other</i>	The system provides a fallback response if the Gemini API is unavailable due to rate limits.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The application should load pages and display results quickly.	Page loads within 2–3 seconds .
2	Scalability	The system should support future expansion for more users and additional features.	Easy integration with cloud hosting and databases.
3	Security & Data Privacy	User information should be protected and API keys stored securely.	Secure authentication and environment variable protection.
4	Reliability & Availability	The application should continue working even if the AI API reaches its usage limit.	Fallback response displayed instead of application failure.
5	Usability & Accessibility	The interface should be simple, responsive, and easy for all users to understand.	Responsive design with clear and user-friendly navigation.
6	<i>Other</i>	The project should have a modular structure so new features can be added easily.	Organized React and FastAPI code with reusable components.
