Team ID	
Project Title	AI Powered Debt Relief & Financial Recovery Platform
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform loan approval using machine learning, boosting efficiency and accuracy. It tackles system inefficiencies, promising better operations, reduced risks, and happier customers. Key features include a machine learning-based credit model and real-time decision-making.

Project Overview	
Objective	The main objective is to help users understand and manage their debts by providing simple financial analysis, AI-based guidance, and recovery suggestions through an easy-to-use web application.
Scope	The project allows users to manage loan details, view financial analysis, understand debt risk, access recovery guidance, and learn about consumer protection rights using an AI-powered platform.
Problem Statement	
Description	Many people struggle to manage multiple loans and EMIs. Existing financial information is often difficult to understand and does not provide simple recovery guidance.
Impact	This can lead to poor financial decisions, increased debt, and financial stress. Users need a simple platform that helps them understand their financial condition and recovery options.
Proposed Solution	
Approach	Develop a web application using React , FastAPI , and Google Gemini AI to analyze loan information, display financial status, and provide simple recovery guidance.
Key Features	• Secure user login. • Loan management dashboard. • AI-powered financial analysis. • Recovery Matrix with financial guidance. • Consumer protection and compliance information. • Fallback response when the AI API reaches its request limit.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	Intel Core i5 or higher
Memory	RAM specifications	8 GB or higher
Storage	Disk space for data, models, and logs	256 GB SSD or higher
Software		
Frameworks	Python frameworks	React (Vite), FastAPI
Libraries	Additional libraries	Axios, Google Generative AI SDK, CSS Modules
Development Environment	IDE	Visual Studio Code, Python, Node.js
Data		
Data	Source, size, format	User-provided loan details JSON and SQLite Database
